

## Latest from the PowerShell Gallery Filtered

These are the latest 250 modules published to the [PowerShell Gallery](#). Azure and AWS modules published by Microsoft and Amazon have been **excluded** from this report. The newest modules are listed first. Use Import-Module to install them or check the online repository for more information.

### [Find-Geolocation](#) | 1.0.0

Published: 08/13/2022 22:44:17 by Adam Bacon

This module is using <https://freegeoip.live> API which is free. Yes. It's totally free. They believe that digital businesses need to get such kind of service for free. Many services are selling Geoip API as a service, but they think that it should be totally free. Feel free to their API as much as you want without any limit other than 10,000 queries per hour for one IP address. I thought this would be another good addition to add to the Powershell Gallery.

### [Carbon | 2.12.0](#)

*Published: 08/10/2022 16:55:40 by Aaron Jensen*

Carbon is a PowerShell module for automating the configuration Windows 7, 8, 2008, and 2012 and automation the installation and configuration of Windows applications, websites, and services. It can configure and manage:

- Local users and groups
- IIS websites, virtual directories, and applications
- File system, registry, and certificate permissions
- Certificates
- Privileges
- Services
- Encryption
- Junctions
- Hosts file
- INI files
- Performance counters
- Shares
- .NET connection strings and app settings
- And much more!

All functions are idempotent: when run multiple times with the same arguments, your system will be in the same state without failing or producing errors.

Provides the ScriptRunner PowerShell Host Environment Variable \$SRXEnv for test and development purposes. The SRXEnv hashtable provides the following keys:

[string] ReportEmail: (3.10.4133.0) If you have an SMTP server available, the ScriptRunner service can send you email notifications containing execution reports, on error or on success. Recipient email address (comma separated list). The full action report will be sent to this address.

[string] ResultEmail: (3.10.4133.0) Recipient email addresses (comma separated list). Only the ResultMessage will be sent to this address.

[string] ResultHtml: (5.2.6155.0) The ScriptRunner PowerShell host supports HTML results through the \$SRXEnv.ResultHtml variable. The HTML web page can then be easily retrieved from the ScriptRunner Portal, Apps and WebApps. For example, you can use the ConvertTo-Html cmdlet to assign HTML to the ResultHTML variable. There are new sample scripts in the Expl/Common folder of the ScriptRunner ScriptRepository that show how to create the HTML in your scripts.

[ArrayList] ResultList: (4.0.4511.0) A scripted query must specify this list of string values. The list is associated with the corresponding action parameter.

[ArrayList] ResultList2: (4.0.4511.0) A scripted query can specify this optional list of display names. The list appears as drop-down list for the associated action parameter.

[string] ResultMessage: (3.00.3670.0) This message will show in the reports, and in the immediate result window of the Portal, Delegate and Self-Service App.

[string] ResultObjectJSON: (4.1.4738.0) The script can now provide (simple) structured result data by writing a (small) JSON string to \$SRXEnv.ResultObjectJSON. ScriptRunner will provide this JSON string in the OutSerializedPSObjects report field, for post-processing by the caller of the Web Service Connector.

[string] SRXActionID: (6.2.577.0) The ID of the started Action. (read-only)

[string] SRXCommandPath: (6.2.642.0) Full filepath of the executed script file used by the started Action (similar

to the PowerShell \$PSCommandPath auto-variable). (read-only)  
 [string] SRXDisplayName: (4.1.4738.0) The name of the current action. (read-only)  
 [string] SRXFilterValue: (6.2.577.0) In case of query execution, this key contains the current filter value from the search filter form in the UI. (read-only)  
 [DateTime] SRXStarted: (4.1.4738.0) The timestamp of the start of the script execution. (read-only)  
 [string] SRXStartedBy: (4.1.4738.0) The user account that requested the execution of the script. (read-only)  
 [string] SRXStartedIP: (4.1.4738.0) IP address of the client that sent the request to perform the script execution. (read-only)  
 [string] SRXStartedReason: (4.1.4738.0) A reason message written by the user who started the Action. (read-only)  
 [string] SRXStartedVia: (4.1.4738.0) The name of the application that started the execution of the script. (read-only)  
 The Cmdlet Reset-SRXEnvironment is used to reset the SRXEnv variable. (This Cmdlet is not available in the ScriptRunner PowerShell Host.)

Prism is a PowerShell module manager inspired by NuGet. Run prism install in a source code repository, and Prism will save private modules into a "PSModules" directory in that repository. Prism let's you:	
<ul style="list-style-type: none"> <li>• Package and deploy modules side-by-side with the app or tool that uses them without needing to install modules globally ahead of time.</li> <li>• Not worry about what modules are or aren't installed. Scripts can import and use modules from the "PSModules" directory in the script's source code repository.</li> <li>• Avoid committing modules to the source code repository. Team members and build processes run prism install to get modules installed.</li> </ul>

### [WebServer | 1.0.5](#)

Published: 08/08/2022 10:26:14 by Markus Scholtes

Powershell WebServer is a module that starts a webserver (without the need for IIS). Powershell command execution, script execution, upload, download and other functions are implemented.

- Start-Webserver starts a webserver listening on port 8080 with binding to localhost only

- Start-Webserver "http://+:8080/" "C:\Data" starts a webserver on port 8080 with binding to all IP addresses with base dir C:\Data

You may have to configure a firewall exception to allow remote access to the chosen port, e.g. with netsh advfirewall firewall add rule name="Powershell Webserver" dir=in action=allow protocol=TCP localport=8080
