[Prism](#) | 0.5.1

Published: 07/13/2022 23:47:49 by WebMD Health Services

Prism is a PowerShell module manager inspired by NuGet. Run prism install in a source code repository, and Prism will save private modules into a "PSModules" directory in that repository. Prism let's you:

- Package and deploy modules side-by-side with the app or tool that uses them without needing to install modules globally ahead of time.
- Not worry about what modules are or aren't installed. Scripts can import and use modules from the "PSModules" directory in the script's source code repository.
- Avoid committing modules to the source code repository. Team members and build processes run prism install to get modules installed.

This Module is a collection of wrapper functions that makes your scripting experience fast and easy. As a scripter you might have come across this situation several times when you have to perform checks before proceeding with a specific task. These functions helps you eliminate the need to perform checks and just use a single command to get the work done. Thereby, enabling you to focus on the main section of your script rather than spending time to write code to perform checks
