### [UnifiedLabelingSupportTool](#) | 3.0.4

*Published: 07/07/2022 13:03:25 by Claus Schiroky*

Have you ever used the Sensitivity button in a Microsoft 365 App? If so, you've either used the Azure Information Protection client or Office's built-in labeling solution. In case something doesn't work as expected or you don't see any labeling at all, the 'Unified Labeling Support Tool' will help you.

The 'Unified Labeling Support Tool' provides the functionality to reset all corresponding client services (UL, AIP, MIP, etc.). Its main purpose is to delete the currently downloaded sensitivity label policies and thus reset all settings, and it can also be used to collect data for failure analysis and problem solving.

Before using the 'Unified Labeling Support Tool', please ensure to read its manual: [https://aka.ms/](https://aka.ms/UnifiedLabelingSupportTool)

## [Prism | 0.5.0](#)

Published: 07/06/2022 21:35:01 by WebMD Health Services

Prism is a PowerShell module manager inspired by NuGet. Run prism install in a source code repository, and Prism will save private modules into a "PSModules" directory in that repository. Prism let's you:

- Package and deploy modules side-by-side with the app or tool that uses them without needing to install modules globally ahead of time.
- Not worry about what modules are or aren't installed. Scripts can import and use modules from the "PSModules" directory in the script's source code repository.
- Avoid committing modules to the source code repository. Team members and build processes run prism install to get modules installed.

### **[Carbon](#) | 2.11.3**

*Published: 06/30/2022 17:41:48 by Aaron Jensen*

Carbon is a PowerShell module for automating the configuration Windows 7, 8, 2008, and 2012 and automation the installation and configuration of Windows applications, websites, and services. It can configure and manage:

- Local users and groups
- IIS websites, virtual directories, and applications
- File system, registry, and certificate permissions
- Certificates

- Privileges
- Services
- Encryption
- Junctions
- Hosts file
- INI files
- Performance counters
- Shares
- .NET connection strings and app settings
- And much more!

All functions are idempotent: when run multiple times with the same arguments, your system will be in the same state without failing or producing errors.
