### [Prism](#) | 0.5.2

*Published: 08/04/2022 16:49:00 by WebMD Health Services*

Prism is a PowerShell module manager inspired by NuGet. Run prism install in a source code repository, and Prism will save private modules into a "PSModules" directory in that repository. Prism let's you:

- Package and deploy modules side-by-side with the app or tool that uses them without needing to install modules globally ahead of time.
- Not worry about what modules are or aren't installed. Scripts can import and use modules from the "PSModules" directory in the script's source code repository.
- Avoid committing modules to the source code repository. Team members and build processes run prism install to get modules installed.

### [UnifiedLabelingSupportTool | 3.0.5](#)

Published: 08/03/2022 12:08:08 by Claus Schiroky

Have you ever used the Sensitivity button in a Microsoft 365 App? If so, you've either used the Azure Information Protection client or Office's built-in labeling solution. In case something doesn't work as expected or you don't see any labeling at all, the 'Unified Labeling Support Tool' will help you.

The 'Unified Labeling Support Tool' provides the functionality to reset all corresponding client services (UL, AIP, MIP, etc.). Its main purpose is to delete the currently downloaded sensitivity label policies and thus reset all settings, and it can also be used to collect data for failure analysis and problem solving.

Before using the 'Unified Labeling Support Tool', please ensure to read its manual: [https://aka.ms/](https://aka.ms/UnifiedLabelingSupportTool)
