This uses dictionaryapi.dev to obtain the information displayed to you. To my knowledge no dictionary checkers are available as a module on the Powershell Gallery, due to my fondness of the English language and always looking for the most appropriate word to use, I thought creating a module to do just that would be a jolly good idea. This will return the definition of the word, an example of using the word, an audio clip of the phonetics of the word and finally a web link to wiktionary.org to find out even more information on this word you search for. Not every result contains examples and audio.

This module is using <https://freegeoip.live> API which is free. Yes. It's totally free. They believe that digital businesses need to get such kind of service for free. Many services are selling Geoip API as a service, but they think that it should be totally free. Feel free to their API as much as you want without any limit other than 10,000 queries per hour for one IP address. I thought this would be another good addition to add to the Powershell Gallery.
