[FogApi](#) | 2103.2.13

Published: 08/23/2022 15:51:20 by JJ Fullmer

This module is used to easily run Fog API commands on your fogserver from a powershell console or script. This essentially gives you a crossplatform commandline interface for fog tasks and makes many things easier to automate.

The documentation is hosted on readthedocs at <https://fogapi.readthedocs.io/en/latest/>

To install this module you need at least powershell v3, was created with 5.1 and intended to be cross platform compatible with powershell v6

To install this module follow these steps

* Easiest method: Install from PSGallery <https://www.powershellgallery.com/packages/FogApi> `Install-Module -name FogApi`

* Manual Method:

* download the zip of this repo and extract it and use `Import-Module` on the extracted path

The module is now installed.

You can use `Set-FogserverSettings` to set your fogserver hostname and api keys.

The first time you try to run a command the settings.json file will automatically open

in notepad on windows, nano on linux, or TextEdit on Mac

You can also open the settings.json file and edit it manually before running your first command.

The default settings are explanations of where to find the proper settings since json can't have comments

Once the settings are set you can have a jolly good time utilizing the fog documentation

found here <https://news.fogproject.org/simplified-api-documentation/> that was used to model the parameters

i.e.

`Get-FogObject` has a type param that validates to object, objectactivetasktype, and search as those are the options given in the documentation.

Each of those types validates (which means autocompletion) to the core types listed in the documentation.
 So if you typed in `Get-FogObject -Type object -Object h` and then started hitting tab, it would loop through the possible core objects you can get from the api that start with 'h' such as history, host, etc.
 Unless you filter a get with a json body it will return all the results into a powershell object. That object is easy to work with to create other commands. Note: Full Pipeline support will come at a later time i.e.

```

hosts = Get-FogObject -Type Object -CoreObject Host # calls get on http://fog-server/fog/host to list all hosts
Now you can search all your hosts for the one or ones you're looking for with powershell
maybe you want to find all the hosts with 'IT' in the name (note '?' is an alias for Where-Object)
ITHosts = hosts.hosts | ? name -match 'IT';

Now maybe you want to change the image all of these computers use to one named 'IT-Image'
You can edit the object in powershell with a foreach-object ('%' is an alias for foreach-object)
updatedITHosts = ITHosts | % { $_.ImageName = 'IT-Image' }

Then you need to convert that object to json and pass each object into one api call at a time. Which sounds complicated, but it's not, it's as easy as

updateITHosts | % {
  jsonData = $_ | ConvertTo-Json;
  Update-FogObject -Type object -CoreObject host -objectId $_.id -jsonData jsonData;
  #successful result of updated objects properties
  #or any error messages will output to screen for each object
}

```

This is just one small example of the limitless things you can do with the api and powershell objects.

see also the fogforum thread for the module <https://forums.fogproject.org/topic/12026/powershell-api-module/2>

AWS.Tools.XRay 4.1.152	
<i>Published: 08/22/2022 22:48:25 by Amazon.com Inc</i>	
The XRay module of AWS Tools for PowerShell lets developers and administrators manage AWS X-Ray from the PowerShell scripting environment. In order to manage each AWS service, install the corresponding module (e.g. AWS.Tools.EC2, AWS.Tools.S3...). The module AWS.Tools.Installer (https://www.powershellgallery.com/packages/AWS.Tools.Installer/) makes it easier to install, update and uninstall the AWS.Tools modules. This version of AWS Tools for PowerShell is compatible with Windows PowerShell 5.1+ and PowerShell Core 6+ on Windows, Linux and macOS. When running on Windows PowerShell, .NET Framework 4.7.2 or newer is required. Alternative modules AWSPowerShell.NetCore and AWSPowerShell, provide support for all AWS services from a single module and also support older versions of Windows PowerShell and .NET Framework.

AWS.Tools.RDS | 4.1.152

Published: 08/22/2022 22:41:30 by Amazon.com Inc

The RDS module of AWS Tools for PowerShell lets developers and administrators manage Amazon Relational Database Service from the PowerShell scripting environment. In order to manage each AWS service, install the corresponding module (e.g. AWS.Tools.EC2, AWS.Tools.S3...). The module AWS.Tools.Installer

(<https://www.powershellgallery.com/packages/AWS.Tools.Installer/>) makes it easier to install, update and uninstall the AWS.Tools modules. This version of AWS Tools for PowerShell is compatible with Windows PowerShell 5.1+ and PowerShell Core 6+ on Windows, Linux and macOS. When running on Windows PowerShell, .NET Framework 4.7.2 or newer is required. Alternative modules AWSPowerShell.NetCore and AWSPowerShell, provide support for all AWS services from a single module and also support older versions of

Windows PowerShell and .NET Framework.

The MQ module of AWS Tools for PowerShell lets developers and administrators manage Amazon MQ from the PowerShell scripting environment. In order to manage each AWS service, install the corresponding module (e.g. AWS.Tools.EC2, AWS.Tools.S3...). The module AWS.Tools.Installer (<https://www.powershellgallery.com/packages/AWS.Tools.Installer/>) makes it easier to install, update and uninstall the AWS.Tools modules. This version of AWS Tools for PowerShell is compatible with Windows PowerShell 5.1+ and PowerShell Core 6+ on Windows, Linux and macOS. When running on Windows PowerShell, .NET Framework 4.7.2 or newer is required. Alternative modules AWSPowerShell.NetCore and AWSPowerShell, provide support for all AWS services from a single module and also support older versions of Windows PowerShell and .NET Framework.

[AWS.Tools.LicenseManagerUserSubscriptions](#) | 4.1.152

Published: 08/22/2022 22:34:57 by Amazon.com Inc

The LicenseManagerUserSubscriptions module of AWS Tools for PowerShell lets developers and administrators manage AWS License Manager User Subscription from the PowerShell scripting environment. In order to manage each AWS service, install the corresponding module (e.g. AWS.Tools.EC2, AWS.Tools.S3...). The module AWS.Tools.Installer (<https://www.powershellgallery.com/packages/AWS.Tools.Installer/>) makes it easier to install, update and uninstall the AWS.Tools modules. This version of AWS Tools for PowerShell is compatible with Windows PowerShell 5.1+ and PowerShell Core 6+ on Windows, Linux and macOS. When running on Windows PowerShell, .NET Framework 4.7.2 or newer is required. Alternative modules AWSPowerShell.NetCore and AWSPowerShell, provide support for all AWS services from a single module and also support older versions of Windows PowerShell and .NET Framework.

The FMS module of AWS Tools for PowerShell lets developers and administrators manage Firewall Management Service from the PowerShell scripting environment. In order to manage each AWS service, install the corresponding module (e.g. AWS.Tools.EC2, AWS.Tools.S3...). The module AWS.Tools.Installer (<https://www.powershellgallery.com/packages/AWS.Tools.Installer/>) makes it easier to install, update and uninstall the AWS.Tools modules. This version of AWS Tools for PowerShell is compatible with Windows PowerShell 5.1+ and PowerShell Core 6+ on Windows, Linux and macOS. When running on Windows PowerShell, .NET Framework 4.7.2 or newer is required. Alternative modules AWSPowerShell.NetCore and AWSPowerShell, provide support for all AWS services from a single module and also support older versions of Windows PowerShell and .NET Framework.
