Latest from the PowerShell Gallery Filtered

These are the latest 250 modules published to the [PowerShell Gallery](). Azure and AWS modules published by Microsoft and Amazon have been **excluded** from this report. The newest modules are listed first. Use Import-Module to install them or check the online repository for more information.

FogApi | 2103.2.13

Published: 08/23/2022 15:51:20 by JJ Fullmer

This module is used to easily run Fog API commands on your fogserver from a powershell console or script. This essentially gives you a crossplatform commandline interface for fog tasks and makes many things easier to automate.

```
The documentation is hosted on readthedocs at https://fogapi.readthedocs.io/en/latest/

To install this module you need at least powershell v3, was created with 5.1 and intended to be cross platform compatible with powershell v6
To Install this module follow these steps
* Easiest method: Install from PSGallery https://www.powershellgallery.com/packages/FogApi Install-Module -name fogApi

* Manual Method:
* download the zip of this repo and extract it and use Import-Module on the extracted path

The module is now installed.
You can use Set-fogserverSettings to set your fogserver hostname and api keys.
The first time you try to run a command the settings.json file will automatically open
in notepad on windows, nano on linux, or TextEdit on Mac
You can also open the settings.json file and edit it manually before running your first command.
The default settings are explanations of where to find the proper settings since json can''t have comments

Once the settings are set you can have a jolly good time utilzing the fog documentation
found here https://news.fogproject.org/simplified-api-documentation/ that was used to model the parameters

i.e.

Get-FogObject has a type param that validates to object, objectactivetasktype, and search as those are the options given in the documentation.
Each of those types validates (which means autocompletion) to the core types listed in the documentation.
So if you typed in Get-FogObject -Type object -Object  h and then started hitting tab, it would loop through the possible core objects you can get from the api that start with ''h'' such as history, host, etc.

Unless you filter a get with a json body it will return all the results into a powershell object. That object is easy to work with to create other commands. Note: Full Pipeline support will come at a later time
 i.e.

 hosts = Get-FogObject -Type Object -CoreObject Host # calls get on http://fog-server/fog/host to list all hosts
 Now you can search all your hosts for the one or ones you''re looking for with powershell
 maybe you want to find all the hosts with ''IT'' in the name  (note ''?'' is an alias for Where-Object)
ITHosts = hosts.hosts | ? name -match ''IT'';

Now maybe you want to change the image all of these computers use to one named ''IT-Image''
You can edit the object in powershell with a foreach-object (''%'' is an alias for foreach-object)
updatedITHosts = ITHosts | % { _.imagename = ''IT-image''}

Then you need to convert that object to json and pass each object into one api call at a time. Which sounds complicated, but it''s not, it''s as easy as

updateITHosts | % {
    jsonData = _ | ConvertTo-Json;
    Update-FogObject -Type object -CoreObject host -objectID _.id -jsonData jsonData;
    #successful result of updated objects properties
    #or any error messages will output to screen for each object
}

This is just one small example of the limitless things you can do with the api and powershell objects.

see also the fogforum thread for the module https://forums.fogproject.org/topic/12026/powershell-api-module/2

PSDataverse | 0.0.2

Published: 08/21/2022 16:16:54 by Reza Niroomand

Bring Dataverse's Web API to PowerShell.

Downloads: 16	Repository: https://github.com/rezanid/PSDataverse

PSTeams | 2.2.1

Published: 08/21/2022 15:31:04 by Przemyslaw Klys

PSTeams is a PowerShell Module working on Windows / Linux and Mac. It allows sending notifications to Microsoft Teams via WebHook Notifications. It's pretty flexible and provides a bunch of options. Initially, it only supported one sort of Team Cards but since version 2.X.X it supports Adaptive Cards, Hero Cards, List Cards, and Thumbnail Cards. All those new cards have their own cmdlets and the old version of creating Teams Cards stays as-is for compatibility reasons.

Downloads: 239,477	Repository: https://github.com/EvotecIT/PSTeams

AutomatedLab.Common | 2.2.247

Published: 08/21/2022 14:00:36 by Raimund Andree Per Pedersen Jan-Hendrik Peters

The module collects all helper functions used in but not limited to AutomatedLab

Downloads: 40,495	Repository: https://github.com/AutomatedLab/AutomatedLab.Common/
