Prism | 0.5.0

Published: 07/06/2022 21:35:01 by WebMD Health Services

Prism is a PowerShell module manager inspired by NuGet. Run prism install in a source code repository, and Prism will save private modules into a "PSModules" directory in that repository. Prism let's you:

• Package and deploy modules side-by-side with the app or tool that uses them without needing to install modules globally ahead of time.

• Not worry about what modules are or aren't installed. Scripts can import and use modules from the "PSModules" directory in the script's source code repository.

• Avoid comitting modules to the source code repository. Team members and build processes run prism install to get modules installed.
